Photosynthesis

Explain the process of photosynthesis in a detailed and clear manner in one paragraph with a conclusive statement. The process of photosynthesis is a process of the production of energy from the sun's energy. The sun's light is the energy that is used to produce the energy. , the sun is the source of the energy, and the sun produces the energy by burning the sun-generated heat. The energy is then used to generate the energy for the production process. The process of photovoltaic (PV) is the process by which the sun converts the energy from sunlight into electricity. .
